This office action is responsive to communications filed 03/12/2004.

**Claims 1 – 24 are pending.**

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1 – 11 and 13 – 22 are rejected under 35 U.S.C. 102(a) as being anticipated by WO 02/051519 (See the enclosed GB 2 375 973 A for an English translation of WO 02/051519).

The document WO'519 discloses (See Figs. 1 – 3) a hydraulically actuated seat valve (16) comprising, a base part (22) defining a valve seat and having a radially outward projecting collar (22a) that is structured to support a welded joint to mount the valve to a further component (13,14), a cover part (15) connected to said base part; and a valve body (25) displaceably disposed in said cover part, said valve body having a sealing surface cooperating with said valve seat of said base part to close the valve. The cover part has locking sections (15a, 15c) and the base part has a sectionally circumferential bridge (Fig. 2, underside of (22a)) that extends radially outward to cooperate with locking sections of the cover part. The cover part also includes a radially inwardly offset and at least sectionally circumferential shoulder or step (near (18a) and (13d) in Fig. 1), which is suited for abutment to the further component.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3753

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 23 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 02/051519.

The document WO '519 discloses the claimed invention with the exception of explicitly disclosing the recited separation between a surface of the abutment section and the step in claims 23 and 24 to be either larger or smaller than that between a surface of said collar facing said incoming flow and the step. In this office action such a separation is regarded as a design choice in that it neither provides any new and/or unexpected result nor solves any stated problem. Further the arrangement in WO '519 would perform equally well with the recited separation between a surface of the abutment section and the step to be either larger or smaller than that between a surface of said collar facing said incoming flow and the step.

Art Unit: 3753

6. Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
